

Neil A. Tellez

neil.tellez.dev@gmail.com | neveon.github.io | Austin, TX

PROFESSIONAL SUMMARY

Mid-level software engineer with 3 years of experience at Amazon Security building Java/Scala data ingestion pipelines and a React/Python query platform. Saved \$1.4M/yr, cut Sev-2 on-call ~97%, and led a 50+ PB Prime Day recovery.

PROFESSIONAL EXPERIENCE

Software Development Engineer

August 2022 – July 2025

Amazon

Austin, TX

- **\$1.4M/yr saved** and Sev-2 on-call tickets cut ~97% (~60 → ~2/week) by architecting a multi-cluster feature for a petabyte-scale pipeline that eliminated a chronic source of operational risk and on-call burden the team carried for years.
- **50+ PB of security data recovered in 48 hours** during a Prime Day outage by orchestrating concurrent workflows across multiple EMR clusters, restoring global threat visibility.
- **75% reduction in onboarding time (4 weeks → 1 week)** by leading design reviews and building a self-service onboarding tool, eliminating manual, error-prone integration steps across 5+ partner teams.
- **100+ AWS/subsidiary log sources onboarded** by authoring and leading cross-team reviews of 4 SOPs that standardized the self-service process, reducing redundancy and eliminating configuration errors.
- Delivered a full-stack data cleanup service that **purged 100+ PB of deprecated security data**, reducing storage overhead and automating a previously manual deprecation process.
- **Halved engineer ramp-up time (8 weeks → 4 weeks)** by mentoring 4 engineers across 2 teams and authoring reusable training documentation.
- Instrumented pipelines with CloudWatch metrics and dashboards; used logging and throughput signals to triage on-call incidents and drive data-informed reliability improvements.

AI Research Fellow

July 2021 – May 2022

Kean University

Union, NJ

- Developed PyTorch-based methodology to automatically measure weights and biases across transformer encoding layers, identifying sources of model bias; co-authored 2 peer-reviewed papers (ISNCC & SAIS).

Summer Research Scholar

May 2021 – July 2021

Massachusetts Institute of Technology – Consortium of Scientists for Pandemic Preparedness

Remote

- Re-engineered Python benchmarking tool and antibiotic-resistance NLP model; processed DNA datasets on C3DDB cluster using biocomputational tools such as Biopython, MAFFT and EVcouplings.
- Adapted NLP model from RNA viral strain prediction to tuberculosis DNA sequence analysis, enabling identification of novel TB strains for vaccine development.

Machine Learning Researcher

July 2020 – September 2020

California State University

Remote

- Built a Convolutional Neural Network (CNN) model to automate car insurance claim image reviews with TensorFlow and Keras.

Full Stack Software Engineer

June 2019 – July 2020

Independent Freelancer

Remote

- Deployed 2 applications across 8 wedding clients, serving 900+ guests and securely processing thousands of photo uploads.
- Launched multiple full-stack web applications enabling guests to upload and view photos, built on React and Firebase.
- Implemented JWT authentication ensuring only authorized guests could view and download images.

PROFESSIONAL SKILLS

Cloud	AWS (ECS, EMR, MSK, S3, SNS, SQS, Lambda, VPC, CloudWatch, EventBridge, API Gateway)
Languages	Java, Python, Scala, TypeScript, JavaScript
Other	Bash, Git, React, Node, SQL, Spark, Hive, Docker

EDUCATION

Kean University

B.S. Computer Science — Magna Cum Laude, GPA: 3.7

LEADERSHIP AND OTHER ACTIVITIES

Austin Disaster Relief Network — Volunteer Debris Cleanup & Supply Distribution | July 2025

Association for Computing Machinery (ACM) — President, 2020-2021

Chi Psi (ΧΨ) — Philanthropy Council Member, 2015-2018
