

Neil A. Tellez

neil.tellez.dev@gmail.com | neveon.github.io | Austin, TX

SUMMARY

Experienced in petabyte-scale data pipelines at Amazon & AWS Security; owned multi-cluster feature saving \$1.4M/yr, delivered full stack data cleanup service, and drove >95% Sev-2 reduction; prior AI research at MIT and full stack freelance experience.

EXPERIENCE

Software Development Engineer

August 2022 – July 2025

Amazon

Austin, TX

- Developed a multi-cluster feature for a petabyte-scale data pipeline achieving \$1.4M in annual infrastructure cost savings and reducing Sev-2 on-call tickets from ~60/week to ~2/week on average.
- Designed and built a scalable API ingestion service on AWS that streamed 1+ TB of security data daily, saving \$100K/yr with idempotent integrations.
- Added 100+ AWS/subsidiary log sources by authoring 4 SOPs and developed automation with Bash/Python tooling, slashing onboarding time by 75% (4 weeks → 1 week) for 5+ partner teams.
- Owned end-to-end full-stack development (React frontend, backend APIs) of deprecate/delete capability for security query platform, reducing operational and storage costs.
- Directed recovery of 50+ PB of security data during Prime Day outage by orchestrating concurrent workflows across multiple EMR clusters, completing in 48 hours and preserving global threat visibility.
- Mentored 4 engineers across 2 teams and halved ramp-up time (8 weeks → 4 weeks) through team documentation & training sessions.
- Led security reviews and updates with partner teams to achieve HIPAA & PII compliance, enabling pipeline launch to production.

AI Research Fellow

July 2021 – May 2022

Kean University

Union, NJ

- Developed PyTorch-based methodology to automatically measure weights and biases across transformer encoding layers, identifying sources of model bias; co-authored 2 peer-reviewed papers (ISNCC & SAIS).

Computer Science Tutor

September 2021 – December 2021

Kean University

Union, NJ

- Tutored 30+ CS graduate and undergraduate students in MySQL, Java, JavaScript, Python, NodeJS, ReactJS and PHP.

Summer Research Scholar

May 2021 – July 2021

Massachusetts Institute of Technology – Consortium of Scientists for Pandemic Preparedness

Remote

- Re-engineered Python benchmarking tool and antibiotic-resistance NLP model; processed DNA datasets on C3DDB cluster leveraging biocomputational tools such as Biopython, MAFFT and EVcouplings.
- Adapted NLP model from RNA viral strain prediction to tuberculosis DNA sequence analysis, enabling identification of novel TB strains for vaccine development.

Machine Learning Researcher

July 2020 – September 2020

California State University

Remote

- Built a Convolutional Neural Network (CNN) model to automate car insurance claim image reviews with TensorFlow and Keras.

Full Stack Software Engineer

June 2019 – July 2020

Independent Freelancer

Remote

- Launched multiple full-stack web applications enabling guests to upload and view photos using React and Firebase infrastructure.
- Deployed 2 applications across 8 wedding clients, serving 900+ guests and processing thousands of photo uploads securely
- Implemented JWT authentication with security awareness, ensuring only authorized guests could view and download images

SKILLS

Cloud	AWS (ECS, EMR, MSK, S3, SNS, SQS, Lambda, VPC, CloudWatch, SageMaker, EventBridge, API GW)
Languages	Python, Java, Scala, TypeScript, JavaScript
Other	Bash, Git, React, Node, SQL, Docker

EDUCATION

Kean University

May 2022

B.S. Computer Science - Magna Cum Laude, GPA: 3.7

LEADERSHIP AND OTHER ACTIVITIES

Austin Disaster Relief Network | Volunteer Debris Cleanup & Supply Distribution

Austin, TX - July 2025

ACM President ('20-'21); SHPE ('15-'18), Chi Psi Philanthropy ('15-'18), HACA Walk Volunteer ('15-'18)
